Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

This row of fourteen two-story, two-bay wide vernacular Renaissance Revival-style brick houses with shed roofs and sheet metal cornices were built c. 1905. The houses originally had painted brick facades, now most are covered with formstone.

After the use of wood was outlawed for cornices in 1892, sheet metal became the predominant material used. By the early years of the 20th century, the most popular form of sheet metal cornice sported ball finials and often classical motifs like swags pressed into the frieze area. Generally, only main street two story houses had decorated friezes-the builder saved money on his small street versions by eliminating them. Likewise, while the main street houses in this style would have marble basements, stringers, lintels, and steps, builders used no marble at all on their small street versions, painting the basements white instead. Main street houses would have stained glass transoms over both the door and the wide first floor window; on the small streets builders offered stained glass only in the door transom.

The houses are two stories in height, 12' wide (12'6" wide for the south end house) and occupy lots 60' deep. Each house is three small rooms deep and there is no backbuilding. Each house has a single hooded chimney located near the rear of the house. The houses are built in running bond and were originally painted and striped, but most are now covered with formstone. The shed roof is capped by a continuous sheet metal cornice consisting of a crown molding, decorated with a row of dentils, supported by three long brackets, decorated with grooves, that connect to a lower molding strip and end with a distinct trefoil pattern. The brackets and lower molding strip frame a brick frieze area. The brackets have triangular caps, decorated with rosettes, that rise above the roofline.

The door and window openings have segmentally arched brick lintels, with plain tympanums. The sills are wood. In a nod to fashionable taste, the first floor windows are wider than those of the second floor. All sash are 1/1, the original configuration. Doorways have a single-light transom, framed by a row of dentils, but no original doors survive. The houses sit on medium-height basements lit by a wide, double-light sash. Each front door is reached by four concrete or brick steps.

Specific dates

c. 1905

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

This group of houses is significant as representing the very last type of small street houses to be built, in the period c. 1905 - 1909, when a new city ordinance outlawed building houses on streets less than 40' wide. Houses of this period were built in the newly fashionable Renaissance-Revival style, first used in three-story houses in the city in the early 1890s.

The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the period c. 1880 to 1910. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of two-story house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and northeast of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell for \$1,200 - \$1,500; small street houses for \$700 - \$900. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the approximately \$750 purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

Most of the houses sold to mainly German-American semi-skilled tradesmen and laborers employed in nearby factories, who received mortgages from a variety of local building and loans, many of them sponsored by the German community.
